Professor: Alison Tracy Hale, Co-Director, English; Aislinn Melchior, Co-Director, Classics

Advisory Committee: Mike Benveniste, English; James Bernhard, Mathematics and Computer Science; Denise Despres, English/Honors/Humanities; George Erving, English/Honors/Humanities (on leave fall 2019); Alison Tracy Hale, English; Suzanne Holland, Honors/Religious Studies; Alisa Kessel, Politics and Government; Kriszta Kotsis, Art and Art History (on leave 2019-2020); David Latimer, Physics; Aislinn Melchior, Classics; John Wesley, English

About the Program
The Honors Program is a unique pathway through the university’s required core curriculum that uniquely engages the intellectual traditions of the liberal arts as a powerful means of understanding our contemporary world. The program is not itself a major, but is taken in conjunction with any major. Honors students benefit from the rich conversations that build over their four years of shared academic, residential, and co-curricular experiences. Prospective students apply separately to the program (see the prompt for Honors on the Common Application), and admission is based upon prior academic achievement and demonstrated understanding of the program’s curricular and residential features. First-year Honors students live in Regester Hall (along with many students who are not in the program) and have the option to continue living in Honors-themed residences thereafter. The program also provides an array of cultural events, including a film series, student-organized dinners, guest lectures, and trips to Seattle/Tacoma museums, theater, symphony, and opera.

Honors courses examine influential authors and works in the Western intellectual tradition that for better and for worse have framed its values, attitudes, and beliefs. These courses address fundamental and enduring questions, such as “What makes something true?" “What makes something good or evil?” “What is the purpose of art?” “What is the proper function of government?” “What is the Self?” The course sequence culminates with an interdisciplinary study of “America” as an idea and an ideal. Honors seniors also research, write, and publicly present a thesis (normally in the student’s major). After successfully completing the prescribed coursework and senior thesis requirements, Honors seniors graduate as Coolidge Otis Chapman Honors Scholars.

Requirements
Honors students must meet the following requirements.
1. First year: SSI1 195, SSI2 196, HON 211
2. Senior year: HON 401
3. Three of the following four courses, usually taken during the sophomore and junior years: HON 206, 212, 213, and 214
4. Write and publicly present a senior thesis, normally in the student’s major.

Once admitted to the Honors program, a student continues so long as s/he maintains a minimum GPA as established by the Honors Committee in all university work or until s/he resigns from the program. The Honors faculty annually reviews the performance of Honors students to determine their continuance in the program. Dismissed students may apply for readmission upon evidence of satisfactory academic improvement.

Course Offerings
Each course carries 1 unit of credit and is offered at least once each academic year. Please see “Frequency of Course Offerings” on page 10.

Seminars in Scholarly Inquiry. See Seminars in Scholarly Inquiry in the Core Curriculum section of this Bulletin for course descriptions (page 10).

SSI1 195 Honors: The Scientific and Romantic Revolutions
SSI2 196 Honors: Postmodernism and the Challenge of Belief

206 The Arts of the Classical World and the Middle Ages  This course introduces selected monuments of the ancient Egyptian, Greek, and Roman artistic traditions as well as works of art of the Early Christian, Byzantine, and Islamic cultures. The course examines a wide range of material—architecture and monumental decoration, painting, sculpture, as well as works of minor arts—to understand the role art played in various societies of the ancient and medieval world. Works of art are examined with particular attention to their original function, context, and intended audience in order to explore how they expressed political, social, and religious meanings. The course introduces key terms and principal methods of art historical inquiry. Prerequisite: admission to the Honors Program. Satisfies the Artistic Approaches core requirement. Students may not receive credit for both ARTH 275 and HON 206. Offered spring term only.

211 Metamorphosis and Identity  This course explores identity across the centuries through stories about metamorphosis. The nature of change reflects cultural, intellectual, and social differences that undergird these stories about self and form from fifth-century Athens to twentieth-century Germany. The course examines how early cultures both anticipate modern ideas of individualism as well as radically diverge in their assumptions about human nature, personal and communal obligations, and change as a threat to or regeneration of order. All of the stories, verbal and visual, reflect tensions and paradoxes through a highly conscious working out of the boundaries between the personal and communal, interior and exterior, private and public, animal and human, despite the fact that they do not share a view of the individual or self that corresponds to a contemporary (and thus diverse) sense of personal identity and autonomy. Prerequisite: admission to the Honors Program. Satisfies the Humanistic Approaches core requirement. To be taken in the first year. Offered spring term only.

212 Origins of the Modern World View  This course studies the development of attempts by scientific thinkers to understand and explain the universe. The central theme is the development of astronomy and physics, but some mention is made of corollary studies in mathematics and other sciences. A major portion of the course is devoted to the Scientific Revolution of the seventeenth century and the work of Kepler, Galileo, and Newton. Another major portion concerns the development of twentieth-century physics, concentrating on relativity and the quantum theory as developed by Einstein, Bohr, Heisenberg, and others. Prerequisite: admission to the Honors Program. Satisfies the Natural Scientific Approaches core requirement. Offered fall term only.

213 Mathematical Reasoning: Foundations of Geometry  This course uses the idea of symmetry as an invitation to explore contemporary mathematics. The roots of the mathematics of symmetry extend back to ancient times, and the current mathematical expression of symmetry was first developed in the early 19th century. The course explores both the history and mathematics of this development and traces where the key ideas have led from there, both mathematically and culturally. Emphasis is placed on how mathematics is discovered and how it fits into broader cultural contexts (including the work of M.C. Escher, fractals, and symmetry in fields other than mathematics). Prerequisite: admission to the Honors Program. Satisfies the Mathematical Approaches core requirement. Offered spring term only.
214 Interrogating Society  This course has as its subject matter the individual’s relation to society and the relationships that arise among individuals, organizations, and institutions over questions of value. It thus enables students to understand their relation to the social world considered as a web of complex and dynamic interrelationships among cultural, economic, psychological, political, ethical and social factors. To this end, the course examines various theories and methods used to analyze this social world, their embedded assumptions, and their application to a variety of contemporary social issues. Prerequisite: admission to the Honors Program. Satisfies the Social Scientific Approaches core requirement. Satisfies the Knowledge, Identity, and Power graduation requirement. Offered fall term only.

401 What is America?  This course provides a comparative, interdisciplinary, and critical examination of “America” (the U.S.) and its endurance as both idea and ideal. Students consider what “America” means--as a place and as a concept, historically and in contemporary times, and to different constituents. Readings and discussion topics address broad issues that have shaped U.S. history and contemporary life, especially those areas around which national identity coheres and those about which the nation has been most conflicted: politics and governance; slavery and freedom; the natural world; capitalism and consumption; industry and technology; immigration and exclusion; civil rights and social justice; culture and the arts. Prerequisite: admission to the Honors Program and completion of all other Honors core courses, or permission from Honors Program Director. Satisfies the Connections core requirement.
