Greetings Faculty Colleagues,

Educational Technology invites you to attend a launch party for our latest project, the Technology Center Development Studio!

Join us in celebrating the first active learning space on campus and find out how to utilize the Studio in your course.

To find out more about the space, please read more in this document or contact your Educational Technologist.

Thanks, and we hope to see you there!

In an effort to explore technology’s impact on the student experience, Technology Services is creating the Technology Center Development Studio. It will be an open, collaborative space that will house new and existing technologies to enable faculty and students to explore the uses of technology in the university setting. The lab will be configured in a way that is both suitable for individual as well as group or class explorations.

The Technology Center Development Studio is designed to provide:

- Flexible seating to promote active learning and collaborative work
- Large video projection systems to further enhance inquiry and sharing of content
- Experimentation with a variety of emerging and existing technology to explore problem solving
- Technology that will be cycled in and out of the space based on the changing digital landscape
- General access for student use during Technology Center hours
- Booking opportunities for teaching and learning experiences based on pedagogical need
- Professional development opportunities for faculty and staff by Educational Technologists
