

# Mobility Printing Instructions for Android Smartphones

1. Connect your device(s) to the **PS-CampusAccess** wifi in order to print on campus.
2. Download the Mobility Print app online or from App Store.

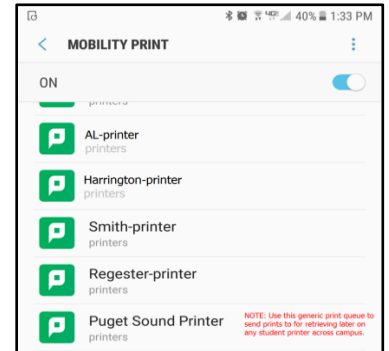

**\*\*Note\*\*** In order to print .PDF files, depending on your device, you may need to download a .PDF reader app such as Adobe Acrobat Reader to enable printing of multiple supported file formats if your device does not have a .PDF reader already installed.

3. Open Mobility Print app, tap the Android Settings button, and turn on Mobility Print.

4. The printer list will show all printers available to send print jobs to. Select printer closest to you to send directly to the printer or use the generic print queue to hold your printout until ready to be released.  
**Note: Puget Sound Printer is the printer which will store your print job until you release the printout using your Loggers ID card.** Read *Printing on Campus* to learn more about printing using your Loggers ID card via the **Student Technology website: [pugetsound.edu/stutech](http://pugetsound.edu/stutech)**

5. You are ready to print!

Find the document to print, locate the print command, click on Print, and send to any designated student printer as shown in step 4. Finish by entering your credentials.
