NEUROSCIENCE

Associate Professor: Jung Kim, Exercise Science; Siddharth Ramakrishnan, Director
Advisory Committee: Roger Allen, Physical Therapy; Susannah Hannaford, Biology; Gary McCall, Exercise Science

About the Program
The Neuroscience Program provides a forum for faculty and students interested in the sub-disciplines within the field of neuroscience. The program offers a general introductory course in neuroscience as an elective for all students, and also offers an interdisciplinary minor that may serve as an enhancement of, or complement to, any major of a student’s choice. This interdisciplinary minor provides additional opportunities for students to develop skills necessary to become successful scientists and is recognized with a designation on the transcript upon graduation. Participation in the minor by both faculty and students facilitates involvement in broader neuroscience topics and contributes to a sense of community across departments. A key feature of this program is a research or internship experience in the field. Involving students in research not only broadens their knowledge and training in brain sciences, but also kindles an interest in and an appreciation for the methodological, philosophical, and ethical issues with which neuroscientists are concerned. This additional experience significantly improves the training of our students as they prepare for entry into careers in basic research, health care, secondary teaching, and public policy. Additionally, the Neuroscience Program is a part of a consortium of Northwest Liberal Arts Colleges offering Neuroscience experiences. pugetsound.edu/neuroscience

Requirements for the Minor in Neuroscience
1. Completion of five units to include:
   A. NRSC 201, Introduction to Neuroscience (prerequisite: BIOL 111 OR BIOL 101 with permission of instructor OR permission of instructor). Note: Completion of NRSC 201 with a grade of C or better is required to earn an emphasis in neuroscience minor.
   B. Completion of three units of elective courses, at least two from outside the student’s major. No more than one elective course may be used to fulfill the student’s major and neuroscience minor. Selection of elective courses should be made in consultation with a neuroscience advisor.

   Biological Foundations of Neuroscience
   BIOL 212 Cell Biology
   BIOL 340 Animal Communication
   BIOL 361 Biochemical Pathways and Processes OR CHEM 461, Metabolic Biochemistry
   BIOL 404 Molecular Biology
   BIOL 434 Neurobiology
   CHEM 461 Metabolic Biochemistry
   EXSC 221 Human Physiology
   EXSC 222 Human Anatomy
   EXSC 328 Neuromuscular Adaptation
   EXSC 424 Recent Advances in Cellular and Molecular Mechanisms of Neuroplasticity
   PHYS 231 Circuits and Electronics
   PSYC 313 Physiological Psychology
   NRSC 350 Methods in Neuroscience

   Cognitive and Behavioral Neuroscience
   BIOL 472 Animal Behavior

   CONN 354 Hormones, Sex, Society, & Self*
   CONN 357 Exploring Animal Minds
   CONN 393 Cognitive Foundations of Morality and Religion
   PHIL 105 Neuroethics and Human Enhancement
   PHIL 230 Philosophy of Mind
   PHIL 250 Moral Philosophy
   PHIL 340 Philosophy of Cognitive Science
   PSYC 230 Behavioral Neuroscience
   PSYC 356 Clinical Neuropsychology
   PSYC 310 Sensation, Perception, and Action
   PSYC 335 Cognitive Psychology
   PSYC 351 Language Development
   PSYC 373 Perceiving Self and Other
   PSYC 313 Physiological Psychology
   STS 318 Science and Gender
   STS 366 History of Medicine

   C. NRSC 450 Senior Seminar: Special Topics in Neuroscience
   * Can also satisfy the Connections core requirement.

   Notes
   1. No more than one course can be taken to fulfill requirements of a student’s first major will not count towards the Neuroscience minor.
   2. Courses may be taken to fulfill the Neuroscience minor requirements and Core, other minor, second major, and university graduation requirements.
   3. Internship/research may be taken for credit through the Internship Program or the student’s major department.

   Course Offerings
   Unless otherwise specified, each course carries 1 unit of credit and is offered at least once each academic year. Please see “Frequency of Course Offerings” on page 18.

   Other courses taught by Neuroscience faculty. See Connections in the Core Curriculum section of this Bulletin for course descriptions.

   CONN 303 Art-Science: Inquiry into the Intersection of Art, Science, and Technology
   Satisfies the Connection core requirement.

   Neuroscience (NRSC)
   201 Introduction to Neuroscience  This course provides a survey of the structure and function of the nervous system, neurophysiology, and sensorimotor systems, including examples of neuropathologies (e.g., spinal cord injury, neuropathic pain, and Parkinson’s disease). Students also explore selected topics in depth, such as motivation (e.g., eating and sexual behavior), memory processes, and clinical disorders (e.g., post traumatic stress, schizophrenia, and dementia). Prerequisite: BIOL
Neuroscience

111, OR BIOL 101 with permission of the instructor, OR permission of the instructor.

350 Methods in Neuroscience  This course offers students an introduction to various methods in the field of Neuroscience. Neuroscience is an interdisciplinary field that spans a range of topics from basic biology to psychology to therapeutics in the clinical setting. This course provides a flavor of a few of the techniques used currently in the field of neurosciences and explore methods from historical, futuristic and ethical perspectives. Hands-on training on a range of methodologies with scope for independent projects is provided. Prerequisite: NRSC 201. Offered occasionally.

450 Senior Seminar: Special Topics in Neuroscience  This course provides a capstone experience for students earning a Neuroscience Emphasis and is designed for senior undergraduates who have completed all other course requirements in the emphasis. This course offers students in the program the opportunity to explore and discuss more sophisticated theories and complex methods in neuroscience than was possible at the introductory level. This seminar features student-led discussions of advanced topics in the discipline, including nervous system organization, neurochemistry, brain plasticity, neural bases of learning and memory, diseases and injury of the nervous system, and neuropharmacology. Also includes evening presentations by guest experts. Prerequisite: Senior neuroscience emphasis or minor, or permission of the instructor.

490 Advanced Topics in Neuroscience  Neuroscience is a rapidly evolving field with new technologies and practices advancing yearly. In this course, experts in the field who are at the forefront of research in neuroscience teach in-depth current research and advanced technologies used for cutting-edge investigations and the future of neuroscience. Postdoctoral researchers from the University of Washington and the Fred Hutchinson Cancer Research Center team teach the course, offering insight into neuroscience within a highly advanced research context. Prerequisite: NRSC 201.

495/496 Independent Study  Variable credit up to 1.00 unit. Independent study is available to those students who wish to continue their learning in an area after completing the regularly offered courses in that area. May be repeated for credit up to 4.00 units. Cannot be audited. Cannot be taken Credit/No Credit.
